Annual Subscription Rates (1977)

For libraries, university departments, government laboratories, industrial and other multiple-reader institutions US $80.00 per annum (including postage and insurance).

All subscription enquiries should be addressed to:
The Subscription Fulfillment Manager, Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW, England.

SPECIALLY REDUCED RATES TO INDIVIDUALS
In the interests of maximizing the dissemination of the research results published in this important international journal we have established a two-tier price structure. Any individual whose institution takes out a library subscription may purchase a second or additional subscription for personal use at the much reduced rate of US $30.00.
Payments must be made in advance.

Microform Subscriptions and Back Issues

Back issues of all previously published volumes are available in the regular editions and on microfilm and microfiche. Current subscriptions are available on microfiche simultaneously with the paper edition and on microfilm on completion of the annual index at the end of the subscription year.

LIST OF CONTENTS

NUMBER 1

J. M. English and Gerard L. Kernan: The prediction of air travel and aircraft technology to the year 2000 using the Delphi method 1
Rodney Vaughan: Some traffic characteristics of an *N*-directional network 9
Torbjörn Thedéen: Freely flowing traffic with journeys of finite lengths 13
R. J. Caudill and J. N. Youngblood: Intersection merge control in automated transportation systems 17
R. Ashworth: An alternative procedure for estimating speed distribution parameters on motorways and similar roads 25
John Kraft and Arthur Kraft: Mode choice characteristics as determinants of interurban transport demand 31
Suzanne P. Evans: Derivation and analysis of some models for combining trip distribution and assignment 37

Short Communication
Nathan H. Gartner: On the application of a response surface methodology to traffic signal settings . 59
Bliographic Section 61

NUMBER 2

H. C. W. L. Williams and J. D. Ortuzar Salas: Some generalizations and applications of the velocity field concept: trip patterns in idealized cities 65
John B. Kreer: Factors affecting the relative performance of traffic responsive and time-of-day traffic signal control 75
Moshe Friedman: A mathematical programming model for optical scheduling of buses' departures under deterministic conditions 83
Ian Williams: A comparison of some calibration techniques for doubly constrained models with an exponential cost function 91
Kenzo Kobayashi: An activity model: a demand model for transportation 105
M. Y. Fawaz and G. F. Newell: Optimal spacings for a rectangular grid transportation network—I. A hierarchy structure 111
M. Y. Fawaz and G. F. Newell: Optimal spacings for a rectangular grid transportation network—II. Revised assignments 121

Short Communication
Gary G. Makowski and Kumares C. Sinha: A statistical procedure to analyze partial license plate numbers 131
Bibliographic Section 133

NUMBER 3

Dirck Van Vliet: Road assignment—I. Principles and parameters of model formulation 137
Dirck Van Vliet: Road assignment—II. The GLTS model 145
Dirck Van Vliet: Road assignment—III. Comparative tests of stochastic methods 151
Edward Weiner: Assessing national urban transportation policy alternatives 159
Yupo Chan: A method to simplify network representation in transportation planning 179
Linda L. Bower: Elasticity of air travel demand with respect to airport access cost 193
M. J. Smith: The location of two ring roads and the control of traffic speed which together minimises radial travel in a town 201
Bernard F. Byrne: Cost minimizing positions, lengths and headways for parallel public transit lines having different speeds 209

Short Communication
H. R. Kirby and F. J. Cesario: A Further comment on Cesario's note on trip distribution 215
Bibliographic Section 217

NUMBER 4

David Branston: Link capacity functions: a review 223
Kenneth D. Garbade and NEal M. Soss: Fare policies for mass transit deficit control: analysis by optimization 237
Michael T. White: An examination of residual distributions in ordinary least squares (OLS) household-based trip generation models 249

Boldizsár Vásárhelyi: Stochastic simulation of the traffic of an uncontrolled road intersection . . . 255
Per Högberg: Estimation of parameters in models for traffic prediction: a non-linear regression . . 263
James H. Gapinski and Howard P. Tuckman: Travel demand functions for Florida bound tourists . 267

Short Communication
Nigel Seymer: Intermodal comparisons of energy intensiveness in long-distance transport 275
Bibliographic Section 281

NUMBER 5

A. S. MacLean: Maximum likelihood and the gravity model 287
Wilfred W. Recker and Thomas F. Golob: An attitudinal modal choice model 299
Neil W. Polhemus: Time series analysis of local fluctuations in traffic parameters 311
Vojin Tošic and Robert Horonjeff: Effect of multiple path approach procedures on runway landing capacity 319
A. D. Pearman: Transport investment appraisal in the presence of uncertainty 331

Short Communications
Michael Florian and Bennett Fox: On the probabilistic origin of Dial's multipath traffic assignment model 339
S. R. Wilson: Statistical notes on the evaluation of calibrated gravity models 343
Bibliographic Section 347

NUMBER 6

Frank A. Haight: Ten years of transportation research 355
Martin J. Beckmann: On the exponential distance effect 357
P. H. Bendtsen: Mean travel time and the exponent of the deterrent function 359
Sven Erlander: Planning for the future—a case for optimizing models 363
Roy Leipnik: Control science and transportation 365
W. Leutzbach: Forschund auf dem Gebiet des Verkehrsablaufs auf Strassen in der Bundesrepublik Deutschland 367
Marvin L. Manheim: Transportation systems analysis: a personal view 371
Heiner Müller-Merbach: Heuristic procedures for solving combinatorial optimization problems in transportation 377
Torbjörn Thedéen: On the aim and future of traffic theoretical research 379
J. Volmuller: Transportation research and the practical application of its results 381
Martin Wohl: Research needs in transportation: what are they and who should support them? . . . 383
T. M. Ridley: Research and decision making 387
Paul Baron: Improving door-to-door freight transport—some notes on a decentralized air-cargo handling system 389
Edward K. Morlok: Scientific research in transportation: the need for new research directions and new support policies 391
Gerhart Potthoff: Verkenrswert, Anlagen und Risiko 395
N. Seshagiri: A fundamental macro-planning model of transportation in developing countries . . . 397
Rodney Vaughan: Whatever happened to Utopia? 401
Katsuhisa Ohno: Road traffic in Japan 403
H. N. Yagoda: Why do we need second-generation traffic control systems 405
Richard de Neufville: Research in transportation systems 407
T. D. Larson: Transportation planning for spaceship earth 409
Richard E. Quandt: The theory of travel demand 411
C. Riveline: The politician, the scientist and the research project 415
Goran Bergendahl: The use of mathematical models for solving transportation problems 417
Larry J. LeBlanc: The use of large scale mathematical programming models in transportation systems 419
W. B. Allen: On relevance in transportation research 423
